1.0 Purpose of Report

Natural Forces is proposing to construct a wind project near Westchester Mountain, NS, the Westchester Wind Project (the Project). The Project is expected to consist of up to 12 turbines. All turbines are expected to have an approximate hub height of 111 m and blade length of 69 m. As part of the design phase of the project, MacNeil Telecom Inc. was contacted to examine the potential impact the proposed Project may have on the performance of existing radio communication systems in the area.

2.0 Radio Advisory Board of Canada/CanWEA (2018) Recommended Process

In certain circumstances, wind turbines, either as single units or grouped together in a wind farm, can negatively affect radio communication and radar systems. The Radio Advisory Board of Canada (RABC) and the Canadian Wind Energy Association (CanWEA) have published a document outlining a series of guidelines to assist with early wind turbine siting to help minimize the impact on radio frequency (RF) systems. In the document, the RABC/CanWEA recommend early consultation with stakeholders to ensure that a given installation does not bring about unacceptable interference, thereby leading to costly changes or delays at a later stage in the wind farm development process.

Innovation, Science and Economic Development (ISED, previously known as Industry Canada) is responsible for the regulation of the radio frequency spectrum in Canada and studies have shown that the installation of a wind turbine has the potential to alter the pattern of nearby antenna systems and negatively impact the performance of RF systems. However, ISED's authority does not extend to the compatibility between radiocommunication systems installed by users of the radio frequency spectrum and the placement of wind turbines or other physical structures, such as electrical power transmission lines, silos, and buildings. ISED maintains a database of information on publicly available radio installations, which is available to proponents of wind projects. Where necessary, proponents of wind projects may contact ISED for further guidance regarding the availability of information on radiocommunication installations.

The locations of existing radio communication and radar system infrastructure within a given search area or consultation zone can be found by performing a RF search using the ISED internet-based service tool. It should be noted that not all licensing records are available for public viewing. These non-disclosed database records are primarily licensed to agencies providing public safety of a national, provincial, or municipal nature as well as the other mandatory contacts listed in Table 1. The wind project proponents must contact these agencies in order to allow them to assess the potential impacts on their radiocommunication or radar systems.

3.0 Analysis Methodology

1. Define the boundaries of the Winchester Wind Project (Figure 1) and the dimensions of the wind turbines;
2. Consider various types of radiocommunication systems that could exist in the area as outlined in the “RABC/CanWEA Technical Information and Coordination Process Between Wind Turbines and Radiocommunication and Radar Systems” document;
3. Send notices of consultation with the Project information to all mandatory contacts operating non-disclosed systems (i.e., DND, CCG, Nav Canada, Environment Canada, RCMP, other public safety agencies);
4. Obtain data for disclosed licensed radio systems from the ISED spectrum database;
5. Produce kmz/shapefiles to show the Project boundaries, identified nearby radio towers, and point-to-point microwave radio links (from step 4).
6. Assess other types of radio systems in accordance with the recommendations in the RABC/CanWEA guidelines;
7. Show the recommended consultation zone for towers (e.g., within 1 km of the project boundaries), point-to-point systems (e.g., 3 x F1 max for links that operate within the boundaries of the Project site lands), and other types of systems;
8. Produce a short list of (disclosed) radio systems that could potentially be impacted, based on their proximity to the Project;
9. Undertake a site visit to verify the communication towers in the area and to confirm the type/quantity of radio systems on each tower. Update the short list and kmz/shapefile as needed;
10. Where deemed necessary and in accordance with the RABC/CanWEA guidelines and engineering best practices, consult with the owners of the short-listed systems, notifying them of the Project and providing adequate technical information to allow them to assess the impact the Project may have on their radio communications systems; and,
11. In the event it is found that the Project is expected to potentially have a significant negative impact on the performance of an existing systems, the proponent and the System Owner will work together to identify mitigation measures that can be taken to resolve the issue to the satisfaction of both entities.

4.0 Limitations of Industry Canada Data

The data contained in the ISED spectrum database is subject to certain limitations, which include:

1. Accuracy of Data

System parameters, such as site locations (latitudes and longitudes), antenna heights, and radio operating parameters, are provided by the licensee (or their representative) and can be prone to error. Such errors are not necessarily known or corrected by ISED. For this report, system owners were contacted, where deemed necessary, to confirm system data.

2. Extent of Data

This report only considers data included in the ISED database as of February 1, 2021.

3. Licensed Radio Systems

The ISED database only includes radio systems that require a license to operate. Non-licensed radio systems (e.g., certain spread-spectrum radios) and protected radio systems (e.g., those used for public safety) are not normally found in the ISED database. As part of the assessment process, owners of non-disclosed systems are consulted and, if possible, a site visit is performed to identify protected/unlicensed systems operating in the area.

4. Status of Systems

It is assumed that all systems identified on the ISED database are still in service. Where deemed necessary, system owners are asked to verify the status of their systems.

5.0 Inputs

Figure 1 shows the location of the Project. The boundaries of the Project are shown in Figure 2. The wind turbine model proposed for the Project has a hub height of 111 m and a blade length of 69 m, for an overall height of 180 m above ground level. The specific locations of the turbines within the Project boundaries have not been finalized. The findings of this report will be used as a guide to select turbine locations during the detailed design phase of the Project.

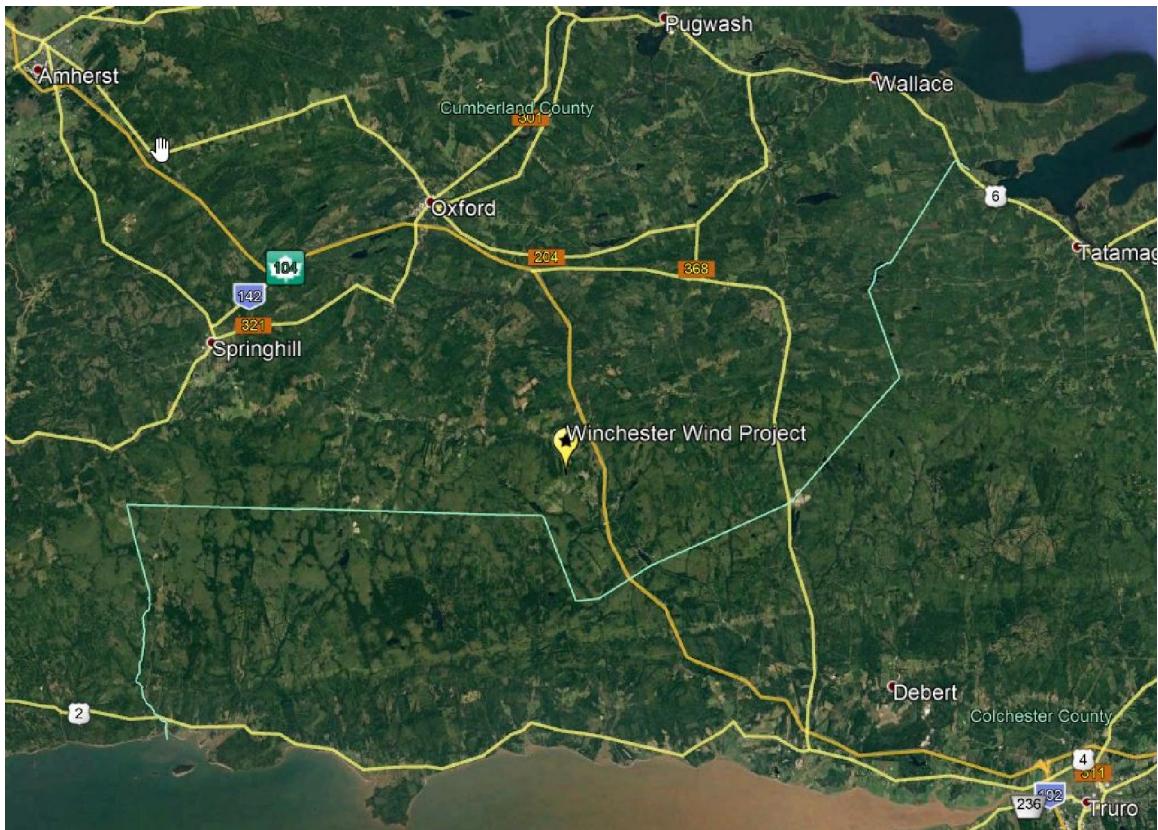

Figure 1 - Location of the proposed Westchester Wind Project.

Figure 2 – Site boundaries of the proposed Westchester Wind Project.

6.0 Findings/Analysis

A site visit was performed in early February 2021 to verify the communication towers in the area and to confirm the findings of the ISED database search.

6.1 Point-to-Point Microwave Radio Systems

The RABC/CanWEA defines the consultation zone for point-to-point (PTP) microwave radio links as:

- i) 1 km radius around the transmit and receive sites; and,
- ii) A radius of three times the maximum first Fresnel zone clearance for the ‘line of sight’ between the transmit and receive sites.

The first Fresnel zone is defined in the RABC/CanWEA guidelines as an ellipsoid between the two antennas (transmit and receive) within which all possible propagation paths are within less than half a wavelength in total length from the direct path. The RABC/CanWEA recommended consultation zone radius ($3 \times F1max$) for high frequency point to point radio links is based on the maximum first Fresnel zone radius ($F1max$). To account for inaccuracies in Google Earth mapping, and in the absence of surveyed site coordinates at this early design stage, an additional 50 m buffer is added to the consultation radius. The recommended width of the consultation zone (with respect to the beam center) is therefore $3 \times F1max + 50$ m buffer + blade length.

$$F1max = 17.3 \times \text{SQRT}(D/(4 \times \text{freq}))$$

According to the ISED database, there are several entities operating licensed PTP microwave radio links in the Project area. The tower locations and the PTP links are shown in Figure 3, and include:

1. Province of NS (Sugarloaf tower, yellow links)
2. Nova Scotia Power (Sugarloaf tower, orange link)
3. Seaside Communications (Sugarloaf tower, green links)
4. Xplornet (Sugarloaf tower, purple link)
5. Rogers Communications (Rogers Westchester tower, red links)
6. Eastlink Communications (Eastlink tower, blue link)

Only three radio links cross the Project site, namely:

1. Seaside: Sugarloaf to Higgins Mountain, 5.8GHz unlicensed (green)
2. Rogers: Westchester to Thompson Station, 6GHz licensed (red, north)
3. Rogers: Westchester to Londonderry, 2 GHz licensed (red, south)

Table 1 shows the calculated radii of the consultation zones for each PTP link. Figure 4 shows the consultation zones for each PTP link and the associated towers. The shaded areas represent the consultation zones radii of $3 \times F1max + 50$ m buffer + 69 m turbine blade. The larger circles around each tower represent the RABC/CanWEA recommended 1 km consultation radii.

Natural Forces

Impact of Proposed Westchester Wind Project on Existing Radiocommunication Systems

Wind turbines positioned outside the consultation zones shown in Figure 5 are not expected to negatively impact the performance of the existing PTP microwave radio links currently operating in the area. The findings of this assessment will be revisited during the turbine location selection process of the detailed engineering phase of the project.

Table 1 - Calculated PTP Consultation Zone Width

Owner	Link Name	Freq. (GHz)	Path Length, D (km)	Consultation Zone Radius (m)			
				3 x F1max (m)	+50 m Buffer	+ Turbine Blade Length (m)	Total Consultation Zone Radius (m)
Seaside	Sugarloaf-Higgins Mtn.	5.8	13.6	40	90	69	318
Rogers	Westchester-Thompson Stn.	6	16.3	43	93	69	324
Rogers	Westchester-Londonderry	2.3	11.6	58	108	69	354
PNS	Sugarloaf-Barr Settlement	4.9	53.2	87	137	69	412
EL	Westchester-Sutherland Lake	18	18.6	27	77	69	292

Figure 3 - Existing radio towers and PTP microwave radio links near the proposed Westchester Wind Project.

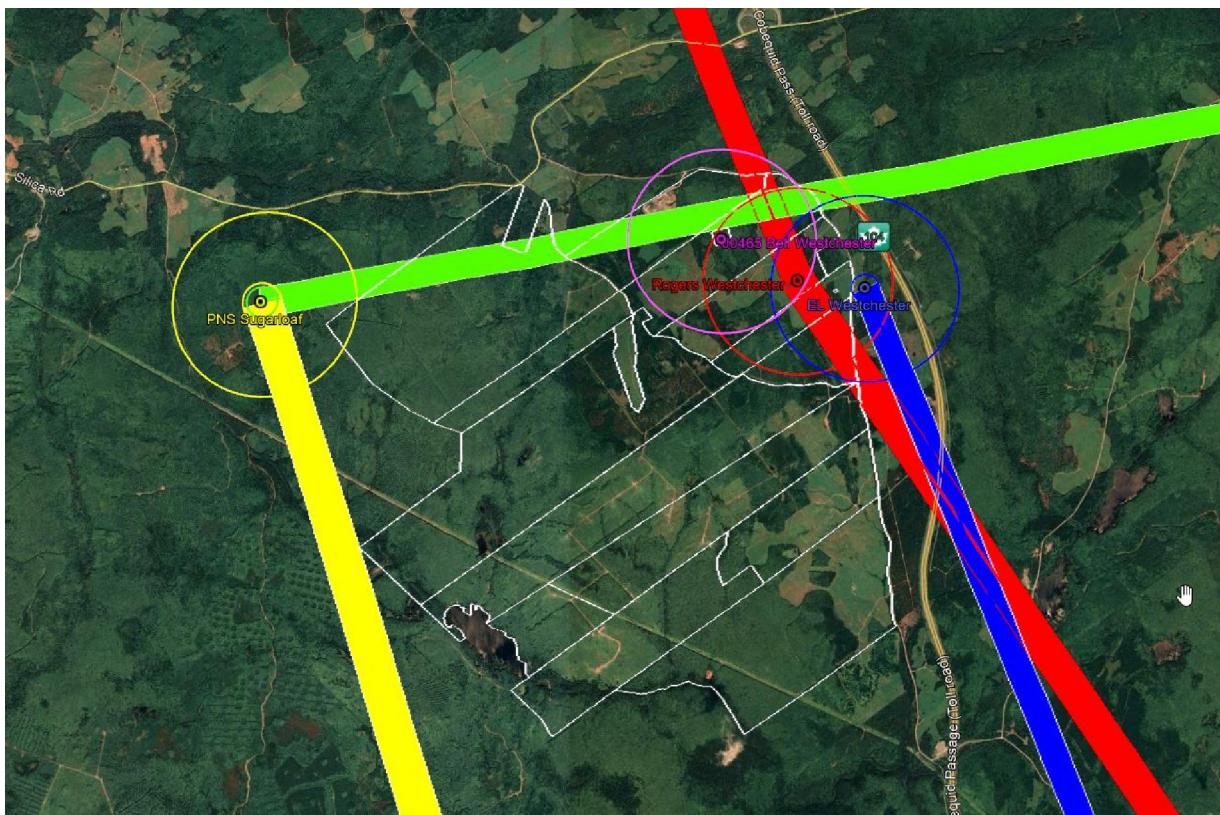

Figure 4 - Consultation zones for the PTP microwave radio links and towers near the proposed Westchester Wind Project.

6.2 Land Mobile Radio, Low Frequency Point-to-Point/Point-to-Multi-Point Systems, and Cellular Towers

The RABC/CanWEA guidelines recommend a 1 km consultation zone for Land Mobile Radio (LMR), low frequency PTP/Point-to-Multi-Point (PTMP), and cellular systems. There are four existing towers in this category near the Project site, which are listed in Table 2.

Table 2 - LMR, PTMP and Cellular Towers Near the Westchester Wind Project

Ref#	Tower Name Latitude Longitude	Tower Owner	Type of Service
1	Westchester (Bell) 45°35'10.73"N 63°44'29.18"W	Bell Mobility	Cellular (700 & 800 MHz)
2	Westchester (Rogers) 45°34'56.60"N 63°43'51.97"W	Rogers Communications	Cellular
3	Westchester (Eastlink) 45°34'54.18"N 63°43'19.03"W	Eastlink Communications	Cellular
4	Sugarloaf 45°34'48.55"N 63°48'13.57"W	PNS, NSP, VFD, Seaside, NSARA, Xplornet	LMR (VHF, UHF, 700MHz), 900MHz PTMP, 3500 PTMP, VHF PTP

Figure 5 shows the 1 km consultation zones for each of these towers extends inside the boundaries of the proposed Project site. Each tower owner in Table 2 has been contacted and made aware of the proposed Project.

It is noted that the RCMP use a restricted LMR system known as the Maritime Public Safety Radio Network (MPSRN) that consists of 700 MHz radio sites in Sand River, Wharton, Claremont, Amherst, Pugwash, Wentworth, and Londonderry. The nearest site (Wentworth) is 10 km from the Project and, therefore, the performance of the MPSRN is not expected to be impacted by the Project.

Wind turbines positioned outside the 1 km consultation zones shown in Figure 5 are not expected to negatively impact the performance of the existing Land Mobile Radio (LMR), low frequency PTP/PTMP, and cellular type systems currently operating in the area. The findings of this assessment will be revisited during the turbine location selection process of the detailed engineering phase of the project.

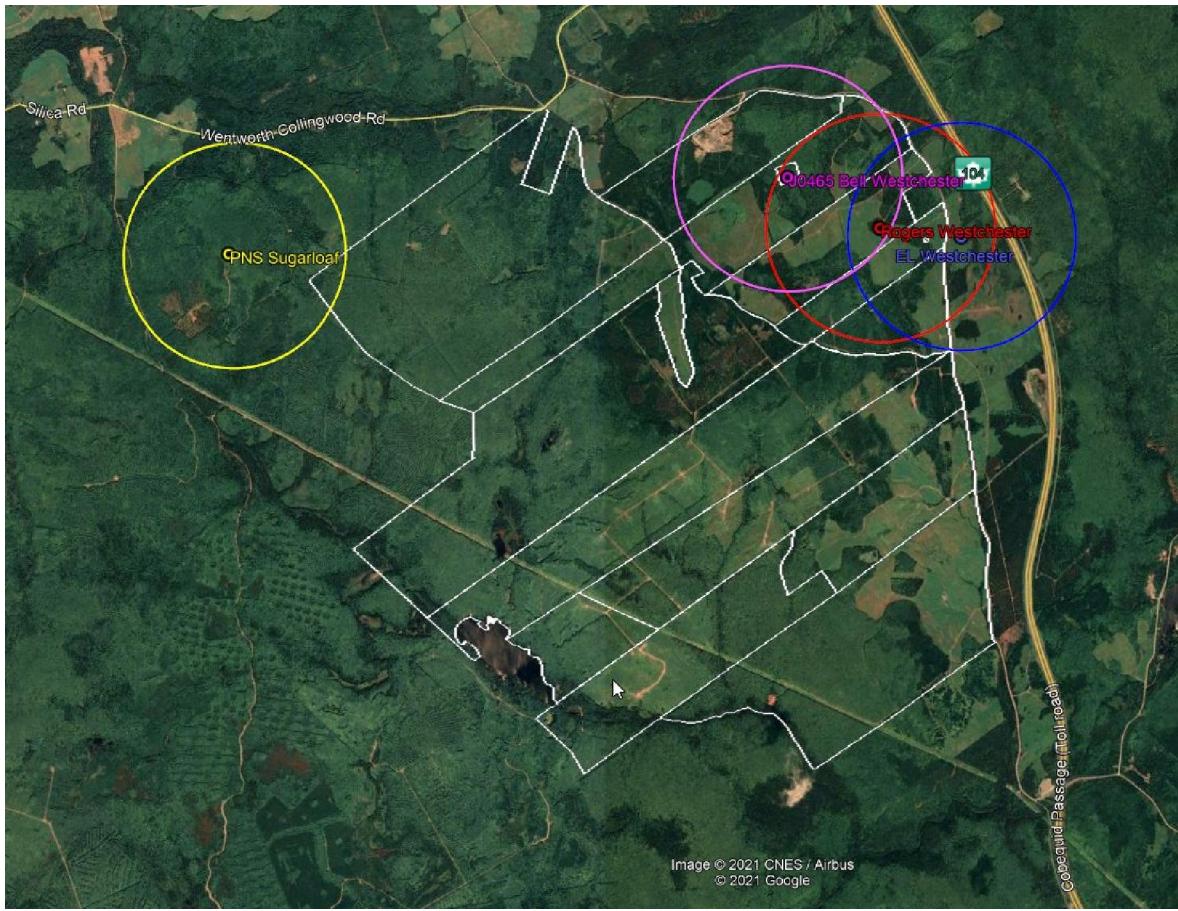

Figure 5 - LMR/PTP/PTMP/cellular towers and their associated consultation zones near the proposed Westchester Wind Project.

6.3 FM Broadcast Transmitters

The RABC/CanWEA recommends a 2 km consultation zone for FM broadcast transmitters. The nearest licensed FM broadcast transmitters to the Project are located in Truro (> 40 km away), Amherst (> 40 km away), and Parrsboro (> 40 km away).

The proposed wind farm is located outside the RABC/CanWEA recommended consultation zone for FM broadcast transmitters and is therefore not expected to impact the operation or performance of existing FM broadcast stations in the area.

6.4 TV Multi-channel Multipoint Distribution Service

The RABC/CanWEA recommends a 2 km consultation zone for TV multi-channel multi-point distribution (MMD) service transmitters.

The proposed Project is located outside the RABC/CanWEA recommended consultation zone for MMD services and is therefore not expected to impact the operation or performance of existing MMD services in the area.

6.5 AM Broadcast Transmitters

The RABC/CanWEA recommends a 5 km consultation zone for AM transmitters with omnidirectional antenna patterns and a 15 km consultation zone for transmitters with directional antenna patterns. The closest licensed AM broadcast station (CFAB) is located in Windsor, NS, approximately 70 km away.

The proposed Project is located outside the RABC/CanWEA recommended consultation zone for AM broadcast transmitters and is therefore not expected to impact the operation or performance of existing AM broadcast stations in the area.

6.6 Over-the-Air Reception

The RABC/CanWEA recommends a 15 km consultation zone for analog TV stations and a 10 km consultation zone for digital TV (DTV) stations. The closest analog TV transmitter is located near Truro (> 40 km away) and the closest digital TV transmitter is located near Halifax (> 100 km away).

The proposed Project is located outside the RABC/CanWEA recommended consultation zone for analog/digital TV stations and is therefore not expected to impact the operation or performance of existing analog and digital TV stations in the area.

6.7 Satellite Systems

The RABC/CanWEA recommends a 500 m consultation zone plus several Fresnel zones for satellite ground systems and direct-to-home (DTH) systems.

According to the ISED license database, the nearest satellite ground station is located in Moncton, NB, approximately 100 km away.

DTH satellite systems include Bell Satellite TV and Shaw Direct services. The approximate antenna azimuth and elevation angle for customers near to the Project are shown in Table 3.

Table 3 – DTH satellite system details near the Project.

DTH System	Satellite/Location	Antenna Az.	Antenna Elev. Angle
Shaw Direct	ANIK F1 / 107.3 deg ANIK F2 / 111.1 deg	235 deg	-18.4 deg
Bell Satellite TV	NIMIQ 4 / 216 deg NIMIQ 6 / 205 deg	205 deg 216 deg	-18.4 deg -18.3 deg

Figures 6 and 7 show the limits of the consultation zone for both Bell Satellite TV and Shaw Direct. The pink lines (Bell) and green lines (Shaw) represent the northern and southern limits for DTH systems whose antenna azimuths pass through the Project site. To our knowledge there are four known residences on Westchester Road adjacent to the Project, three of which are known to utilize Shaw DTV satellite systems today. Figure 8 shows the DTH antenna azimuth for these three residences.

DTH satellite systems near the Project and located between the pink (Bell) or green (Shaw) lines shown in Figure 6 and 7 could be impacted by the Project. Such cases should be further investigated during the detailed engineering phase of project when the turbine locations are finalized. In the event the performance of existing DTH systems within 500m of the Project are shown to be negatively impacted by the turbines, possible work around solutions may include the relocation of the receiver antenna, a change in DTH satellite provider (different antenna azimuth), or a change of technology (e.g. fibre to the home, if available in the area).

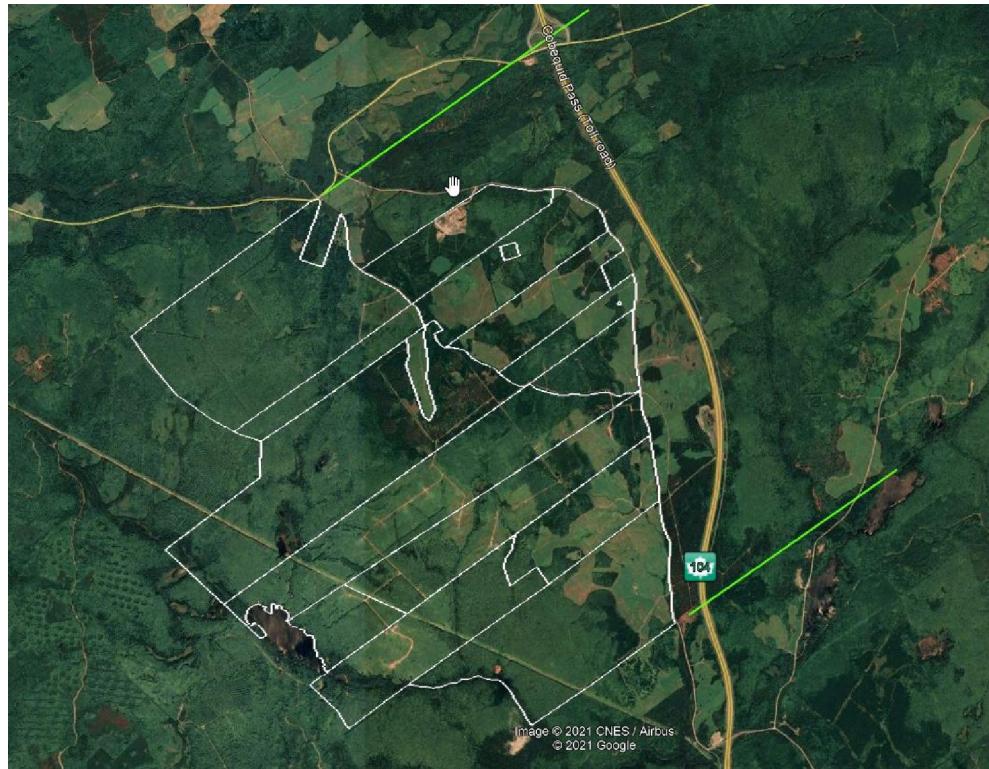

Figure 6 - Extents of the consultation zone for Shaw Direct DTH TV.

Figure 7 - Extents of the consultation zone for Bell Satellite DTH TV.

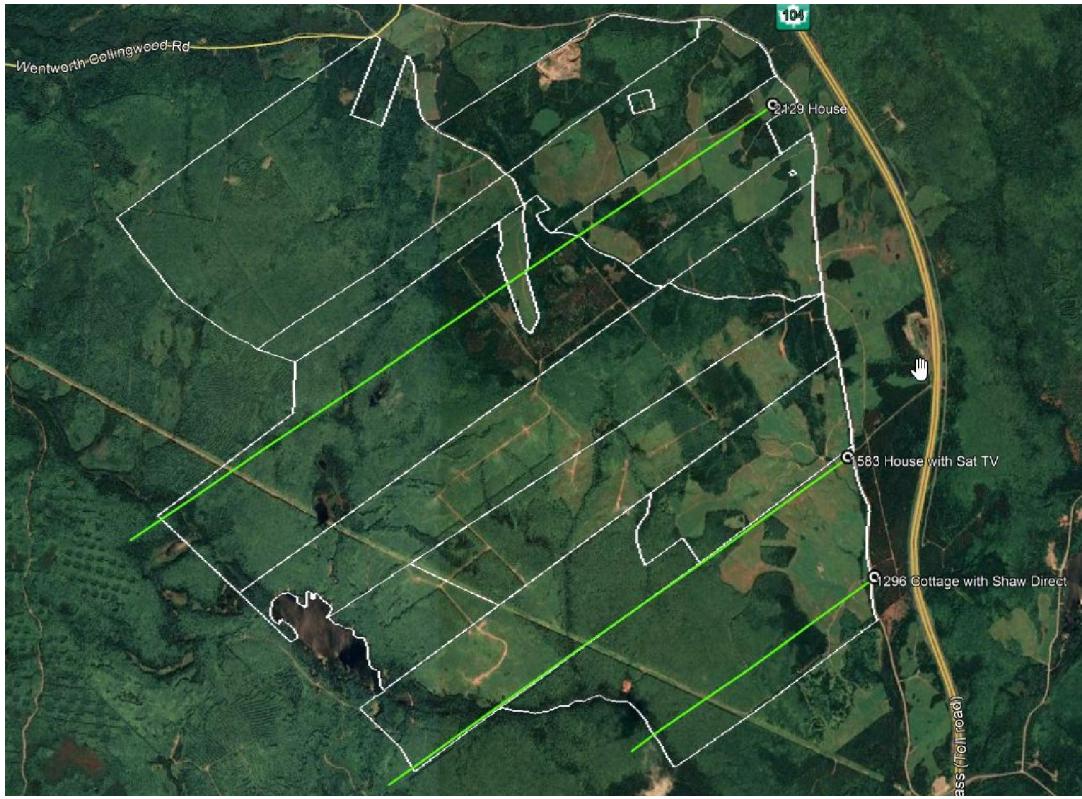

Figure 8 - Shaw Direct DTH antenna azimuths for residences along Westchester Road, adjacent to the Project.

6.8 Broadband Wireless Internet Services

Seaside Communications and Xplornet both have broadband wireless internet service at the PNS Sugarloaf tower adjacent to the western edge of the Project site. Both entities were consulted and asked to assess if the proposed Project is expected to impact the performance of their systems. Both have indicated they do not expect the Project will significantly impact the performance of their broadband wireless internet service.

The proposed Project is not expected to impact the performance of existing Broadband Wireless Internet systems in the area.

6.9 Radar Systems

The RABC/CanWEA recommends the following consultation zones for Department of National Defense (DND) and Navigation Canada (NavCan) radar systems:

- DND Air Defence: 100 km
- DND or NavCan Air Traffic Control Primary Surveillance Radar (PSR): 80 km
- DND or NavCan Air Traffic Control Secondary Surveillance Radar (SSR): 10 km
- DND Precision Approach Radar (PAR): 40 km

The DND North Warning System (NWS) provides early warning surveillance of the airspace across the North American polar region. The nearest radar installation is in Newfoundland. The nearest Royal Canadian Armed Forces (RCAF) Airport Surveillance Radar (ASR)/SSR installation is in Greenwood, NS, approximately 100 km from the proposed Project site.

DND and NavCan were consulted and both have indicated they have no objections to the Project.

6.10 Canadian Coast Guard Vessel Traffic Radar

The RABC/CanWEA recommends a 60 km consultation zone for Canadian Coast Guard (CCG) vessel traffic radar systems. The CCG was consulted and has indicated that they have no objections to the proposed Project.

The proposed Project is not expected to impact the operation or performance of existing radar systems operated by the CCG.

6.11 Military or Civilian Airfield

The RABC/CanWEA recommends a 10 km consultation zone for military and civilian airfields. The nearest airfield is in Debert, approximately 25 km from the proposed Project site, and a helipad at Truro General Hospital, approximately 40 km from the proposed Project site.

Nav Canada has been notified and provided the required information on the proposed wind project.

The proposed wind farm is located outside the RABC/CanWEA recommended consultation zone for Military and Civilian Airfields and is therefore not expected to impact the operation or performance of existing military and civilian airfields in the area.

6.12 Environment Canada Weather Radar

The RABC/CanWEA recommends a 50 km consultation zone for Environment Canada Weather Radar. The nearest weather radar is located in Gore, NS, approximately 50 km from the proposed Project site.

Environment Canada was consulted and have indicated they do not object to the Project as it is not expected to significantly impact the performance of their weather radar systems.

6.13 Very High Frequency OmniRange

RABC/CanWEA recommends a 15 km consultation zone for Very High Frequency OmniRange (VOR) systems. The nearest VOR systems are located at the Halifax Airport (80 km away), the Charlottetown Airport (90 km away), and the Moncton Airport (100 km away).

The proposed wind farm is located outside the RABC/CanWEA recommended consultation zone for VOR systems and is therefore not expected to impact the operation or performance of existing VOR systems in the area.

7.0 Consultation

The Entities that have been contacted for this report and their responses are listed in Table 4. Contact records are included in Appendix A.

Table 4 – Status of Consultations Completed to Date

Type	Entity	Contact	Summary	Consultation Recommended?	Consulted?	Reply Received?	Approved?	Response/Comments
PTP Microwave links Low Freq PTP, LMR, Cellular, PTMP	NS Power	Rene Larocque	One PTP Microwave Link at Sugarloaf Tower	Yes	Yes	Yes	Yes	June 8/20 - No Impact Expected
	Prov NS	Matt Boyle	Two PTP Microwave Links, LMR and Low Freq. PTP systems at Sugarloaf Tower	Yes	Yes	Yes	Yes	June 7/20 - No Impact Expected
	Seaside Communications	Brian Kelly	Two PTP Microwave Links and PTMP Broadband Wireless Internet at Sugarloaf Tower	Yes	Yes	Yes	Yes	Feb 3/21 - No Impact Expected Provided Turbines Are Positioned Outside the PTP Consultation Zone(s) for PTP Links
	Eastlink	Pouya Pourdehimi	One PTP Microwave Link and Cellular systems at Eastlink Westchester Tower	Yes	Yes	Yes	Yes	June 12/20 - No Impact Expected Provided Turbines Are Positioned Outside the 1km Consultation Zone for EL's Westchester Tower
	Rogers	Michael Pennell	Two PTP Microwave Link and Cellular systems at Rogers Westchester Tower	Yes	Yes	Yes	Yes	Feb 23/21 - No Impact Expected Provided Turbines Are Positioned Outside the 1km Consultation Zone for Rogers' Westchester Tower and the PTP Consultation Zone(s) for PTP Links
	Bell Mobility	Vaughan Arsenault	Cellular systems at Bell Westchester Tower	Yes	Yes	No	No	No Impact Expected Provided Turbines Are Positioned Outside 1km Consultation Zone for Bell's Westchester tower. Otherwise further consultation is recommended.
	Xplornet	Esam Ghanem	One PTP Microwave Links and PTMP Broadband Wireless Internet at Sugarloaf Tower	Yes	Yes	Yes	Yes	Feb 12/21 - No Impact Expected
	RCMP	Phil Tanguay	MPSRN Land Mobile Radio and other protected systems.	Yes	Yes	Yes	Yes	Feb 18/21 - No Impact Expected. Nearest MPRSN site is 10km away from wind project
FM Broadcast	N/A	-	RABC/CanWEA recommended consultation zone is 2km. Nearest FM Station is +40km away from wind farm	No	-	-	-	No FM Stations within RABC/CanWEA recommended consultation zone
AM Broadcast	N/A	-	RABC/CanWEA recommended consultation zone is 5km. Nearest AM Station is +70km away from wind farm	No	-	-	-	No AM Stations within RABC/CanWEA recommended consultation zone
TV MMDS	N/A	-	RABC/CanWEA recommended consultation zone is 2km. No known MMD Systems operating in the area	No	-	-	-	No TV MMDS within RABC/CanWEA recommended consultation zone
OTA TV	N/A	-	RABC/CanWEA recommended consultation zone is 10km. Nearest DTV transmitter is 100km away (Halifax) and nearest analog TV transmitter is 40km away (Truro) from wind farm.	No	-	-	-	No OTA TV Stations within RABC/CanWEA recommended consultation zone
Satellite Ground Stations	N/A	-	RABC/CanWEA recommended consultation zone is 500m.	No	-	-	-	No Satellite Ground Stations within RABC/CanWEA recommended consultation zone
Direct To Home (DTH) Satellite TV	N/A	-	RABC/CanWEA recommended consultation zone is 500m. Due to the site geometry (ground elevation and proximity to turbines), an assessment was undertaken specifically for local residences.	No	-	-	-	Several existing DTH satellite systems located on Westchester Rd fall with 500m of the Project and could potentially be impacted by the wind project. Work around solutions may include the relocation of receiver antennas, switching to a different DTH satellite provider, or changing to a different technology (i.e. fibre to home, if available).
Radar	DND	Craig Parle	RABC/CanWEA recommended consultation zones vary from 10km to 100km.	Yes	Yes	Yes	Yes	April 21/21 - No Impact Expected
	Nav Canada	Susan Baggs	RABC/CanWEA recommended consultation zones vary from 10km (PSR) to 80km (SSR).	Yes	Yes	Yes	Yes	July 5/21 - "Construction Start Notification" form must be submitted 10 days prior to start of construction.
	CCG	Martin Gregoire	RABC/CanWEA recommended consultation zone is 60km.	Yes	Yes	Yes	Yes	June 15/21 - No Impact Expected
	Env. Canada		RABC/CanWEA recommended consultation zone is 50km. Closest weather radar is located in Gore, NS approximately 50km from T10 turbine.	Yes	Yes	Yes	Yes	March 3/21 - No Impact Expected
VOR	N/A	-	RABC/CanWEA recommended consultation zone is 15km. Nearest VOR stations are approximately 80-100km away from the wind farm.	No	-	-	-	No VOR stations within RABC/CanWEA recommended consultation zone

8.0 Conclusions and Recommendations

Based on the investigations and findings of this report, wind turbines sited outside the consultation zones identified are not expected to impact the operation or performance of existing radiocommunication systems. As such, the results of this study must be taken into consideration when finalizing the locations of the wind turbines for the Project in order to minimize the impact on existing radio communication systems operating in the area. For specific cases where turbines are planned to be located near or inside the defined consultation zones for PTP and LMR/cellular systems, additional consultation with the system owners is recommended. In-depth technical analyses may be required as part of this process, potentially requiring the services of a land surveyor to verify tower coordinates and to calculate path clearances.
